

Average Price

Take advantage of historical volatility

Price bushels during a seasonal period known for higher prices.

What is it?

Average Price provides the opportunity to capitalize on a historical market trend during March to June, a period when December corn futures prices tend to be higher than during harvest in October and November.

How it works

Enrolled bushels are priced by using a simple average of the corn futures closing prices during the March through June period. Our team of professionals will sell an equal amount of bushels per day during the pricing window. At any point during the averaging period, you can choose to price any unpriced bushels of corn at the current futures price. Final price will be the average of corn futures closing prices during the pricing period less any service fees.

What are the advantages?

- Allows you to take advantage of historical market trends.
- A hands-off approach

What should you know?

- This contract is offered for corn futures only including December and March futures months.
- The pricing window is from March through June every year.
- There is a \$0.03 per bushel investment, which is waived if basis is set at time of enrollment.
- No fee to price out early.

Past performance

80% of our Average Price Programs in the past ten years have returned positive equity to our customers.

While the contract described herein provides a marketing option available through Viterro, no contract or marketing program can remove all risk from your grain marketing descriptions. Historical results are not a guarantee of future returns, and Viterro does not represent the historical information provided is without omissions or errors, although it strives to avoid them.
